ProPLEXIN-CR Review – Cellular Renewal for Your Skin

ProPLEXIN-CR Review – Cellular Renewal for Your Skin

Cellular Renewal is what the CR stands for in [ProPLEXIN-CR](#). This highly effective treatment cream is non prescription, but provides all of the same benefits as prescription medications without the harmful effects. Twelve different ingredients combine to form a super strength cellular renewal technology that can gain you results in less than 15 days. This proven formula was designed to target all of the different signs of aging as well as wrinkles.

Ingredients

There are twelve different ingredients within the ProPLEXIN-CR formula. Some of them are more common, and can be found in almost any other wrinkle reducing cream, such as Vitamin E, collagen, and elastin. Since your body loses collagen and elastin over time due to a variety of reasons, having these ingredients is essential for the repair of damaged and wrinkled skin. Other less common ingredients include:

- Isoflavone – A soy germ, this substance can increase collagen production by more than 20%.
- Dermaxyl – This reduced the volume of wrinkles on the surface of the skin by targeting the areas that are in dire need of repair.
- Hyaluronic Acid – Works in the hydration of skin and lubrication of the skin as well.
- Argireline – A neuropeptide designed to reduce the signs of wrinkles in less than 30 days without the costs of expensive shots or surgery.
- Matrixyl 3000 – A substance that specifically works to reduce the depth of wrinkles, this can work well in 3-6 months.
- Glucoside – This evens out the pigmentation of the skin to produce even skin tone.

These and other ingredients combine to make this cream one of the strongest non prescription treatments on the market that can produce proven results.

Advantages

The amazing combination of ingredients found in ProPLEXIN-CR provide results in as little as 15 days. It is also one of the strongest available treatments on the market because it contains the maximum strength of Argireline.

It does not simply repair damage done to the skin, it also works to regenerate collagen and elastin which aids in the prevention of future wrinkles as well. It is one single cream, so it is easy to use for both women and men. There is also a 60 day money back guarantee backed by the manufacturer.

Disadvantages

The one real disadvantage to this anti wrinkle cream is that is more expensive than some of the other treatments on the market. Other than that, all customer feedback has been positive, and with no known side effects there aren't many bad things to be said.

Cost

One tube, about a 30 day supply of ProPLEXIN-CR costs \$125. That might seem like a lot, but it can still be a considerable savings over more drastic forms of treatment such as surgery and laser procedures. Considering that you will begin to see results in a little over two weeks, and that you can get a money back guarantee, this product can be a good value.

Who Would Benefit Most from This Product?

Those who have tried other treatment methods or creams without satisfactory results may be impressed with ProPLEXIN-CR's key ingredients, and its ability to produce proven results quickly. It can also work well for those who need fast results, but are not willing to risk their health with more drastic treatments.

If you are willing to spend a little bit more money for a proven treatment, then ProPLEXIN-CR may be right up your alley. This highly recommended cream can reduce fine lines and wrinkles in 15 days or less, and is backed by notable sources.
